DETAILED ACTION

Claim Rejections - 35 USC § 112

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claims 1-5 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

There is no antecedent basis for "the end thereof", "the top and bottom ends", "the corner end face", in claim 1; "the equilateral side" and "the end face of the corner wall" in claim 4.

Further, claims 2 and 3 depend from claim 1 which already recites the shape of the openings as hexagonal and they therefore cannot be dodecagonal as well.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over either Darrah et. al. or Carlson in view of any of Learned, Carr or Yang.

either Darrah et. al. or Carlson shows the claimed invention except for the use of a convex spring to hold the sleeve in the ratchet wheel. Any of Learned, Carr or Yang suggests that a driver can have such a spring to hold an element in place on

or in the tool. It would therefore be obvious to one skilled in the art at the time the invention was made to modify either Darrah et. al. or Carlson by using a spring that is flat and convex because any of Learned, Carr or Yang suggests the use of such a holding spring.

Also, Carlson clearly shows the use of a groove around the sleeve to accept any well known type of holding element, e.g. a ball or an O-ring.

5. Arnold is cited only as of interest.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to James G. Smith whose telephone number is 703-308-1746. The examiner can normally be reached on M-Th (7:05- 4:35) first Fri. off.
